COMPANY

Welcome to Mubit: Company and Product Overview

What we build, how the product works, how the company is organised, and who to ask.

Version	Owner	Effective from	Next review	Applies to
2.0	People Team	1 Oct 2026	1 Apr 2027	All new joiners

What Mubit does

Mubit helps teams build reliable agents with a model for every task. Customers point their model calls at Mubit. Mubit calibrates every call at runtime, then builds and refreshes a dedicated model for each task their agents repeat, switching over only when the new model does better. Customers keep their frontier models, and they own what is built.

Our category is **agentic runtime calibration**: improving how an agent behaves using evidence from its own runs.

The product loop

Every part of the product supports one four-step loop. New joiners should be able to explain it in under a minute.

Step	What happens	Why it matters
1. Connect	The customer adds Mubit to their existing agent workflow, keeping their models, tools and orchestration.	No rewrite is needed to start.
2. Capture	Mubit records the context, decisions and tool calls behind each task, and links them to tests, application checks or human feedback.	A successful API response does not prove an answer was correct. Outcomes do.
3. Calibrate	Verified experience becomes reusable memory and candidate improvements to prompts, skills and model behaviour.	The next run starts from what worked.
4. Evaluate	Candidates are tested on held-out tasks, reviewed, and activated only if they help. Earlier versions stay available for rollback.	Customers stay in control of every change.

How we measure improvement

We compare a customer's current setup with runtime calibration on held-out tasks, measuring task success, repeated errors, latency and cost per successful task. We never promise a fixed improvement: results depend on the workload.

Banyan models and latte/bench

- **Banyan** is our family of specialised models, built on open-source and open-weight foundations and trained through Mubit.
- **Banyan Sapling** is the first Banyan model. It checks a claim against the policy and evidence provided and returns one of: supported, violation, missing information, or inconsistent context, with calibrated uncertainty.

- **latte/bench** is our benchmark that tests whether a model can learn from feedback across repeated attempts, using simulated latte art.

Security and trust

Customers send us their agent traces, so trust is part of the product. Mubit is SOC 2 compliant, ISO 27001 certified, ISO 42001 certified, GDPR compliant and HIPAA compliant. Every new joiner completes security training in their first 14 days (see the Information Security Policy).

Company facts

Item	Detail
Legal entity	Reliable AI, Inc.
Investors	Hoxton Ventures, Heavybit and Techstars, plus angels from Cloudflare, AWS and Mistral
Launch week	26 to 30 October 2026: one major feature released each day
Console	app.mubit.ai

How we are organised

Team	Owns	Slack channel
Runtime	Gateway, trace capture, SDKs and framework integrations	#team-runtime
Calibration	Outcome attribution, memory, prompt and skill candidates	#team-calibration
Models	Banyan models, adapter training (Forge), evaluation service	#team-models
Product and Design	Console, docs, developer experience	#team-product
Go-to-market	Sales, solutions engineering, customer success	#team-gtm
People and Ops	Hiring, onboarding, payroll, office, policies	#ask-people

Who to ask

Question about	Ask	Where
Leave, payroll, benefits, policies	Alex Moreno, Head of People	#ask-people
Laptop, accounts, access	IT Helpdesk	#it-help
Security concern or suspected phishing	Sam Okafor, Security Lead	#security (urgent: #security-incidents)
Engineering setup and code review	Your onboarding buddy, then Jordan Lee, Engineering Manager	#eng-help
Customer questions	Your team lead	#team-gtm

Our values

- **Evidence over opinion.** We decide with tests, evals and customer outcomes, not with whoever argues loudest.

- **Keep the customer in control.** Nothing we build activates without review, and everything can be rolled back.
- **Own what you ship.** If you merged it, you watch it in production.

Rituals

Ritual	When	Who
Weekly planning	Monday 10:00 UK	Each team
Show-and-tell	Friday 16:00 UK	Everyone. New joiners demo something in week 1.
All-hands	First Thursday of the month, 17:00 UK	Everyone
